Engineer Platform

Cases

Selected projects, with their scope, key decisions and our role in the work.

Engineer ApS was registered in 2025. These cases include company projects and work our founder carried out in client teams and as an employee, dating back to 2003. Each case explains the role and working arrangement.

Infrastructure simplified beyond AWS

Reviewed an international client’s infrastructure, removed unused services, adjusted capacity and moved workloads away from AWS.

2025

Read the case study

A mapping product, carried end to end

Infrastructure, data processing and the map application itself, built and kept running for two years.

2025

Read the case study

Three locks on the door, none of them locked

Audited the server's intrusion defences and found all three had never worked: one watched the wrong door, one was overruled by a broader rule, and one could not run at all.

2026

Read the case study

Backup automation with an explicit restore method

Implemented restic backup, retention, integrity checks and a monthly restore-test workflow, with documented activation prerequisites. The implementation record dated 2026-10-27 records no completed live restore.

2026

Read the case study

Public services on a small server

Hosted the company's public web and git services on a 512 MB machine, treating memory as a design constraint.

2026

Read the case study

Infrastructure defined in a repository

Defined Engineer ApS host roles, service configuration and checks in Ansible. Reusable configuration keeps infrastructure decisions visible in the repository.

2026

Read the case study

A bounded event pipeline for a macOS app

Bounded event buffers, filtered subscriptions and budgeted logging in a macOS app. A recorded full test run reduced core log lines from 610,996 to 1,411.

2026

Read the case study

A safety net that no longer costs half an hour

Cut the automated checks guarding every release from 27 minutes to 10, by running them in the right order and several at a time.

2026 **Read the case study**

Know the licence of everything you ship

Put a licence check on 644 third-party components that runs on every build, and proved it fires by breaking it on purpose.

2026 **Read the case study**

Your code on your own server

Set up private code hosting on the company's own server, reachable only through one controlled entry point, with no public web panel to attack.

2026 **Read the case study**

These cases introduce selected engineering work in plain language. Each links to the full record: the situation, the contribution and the result. Use the examples to judge relevance to your project, then ask about the scope and supporting evidence.

Find a comparable business result

Compare delivered projects with the business problem you need to solve.
