Administered 40 websites on Apache and Nginx

Administered 40 websites on Ubuntu Linux hosting servers with Apache and Nginx, ensuring high availability and performance.

2003 – 2014

40

websites kept available on Linux hosting

Situation. There was a portfolio of live websites that needed to stay up and stay fast — and hosting is another of those jobs that's invisible until a site goes down, at which point it's the only thing anyone cares about.

Task. Administering those sites and keeping them highly available and quick was the job.

Action. Forty websites ran on Ubuntu Linux hosting servers, on a mix of Apache and Nginx — the configuration, the performance tuning, the ongoing maintenance to keep them reliable under real traffic. Real traffic is the operative bit: a site that's fine when nobody's using it and falls over when they are hasn't been administered, it's just been left alone. So the work was keeping them healthy under actual load.

Result. All forty ran with high availability and good performance, which gave clients hosting they didn't have to think about. Stable and dependable under real use is the entire point of hosting, and that's what these delivered.

Bring this experience to your project

Use "Administered 40 websites on Apache and Nginx" as a starting point for a similar challenge in your organisation. The services behind this work are available for your project. Monitoring and alerts that speak up while a fault is still small, and the figures that show how often it stays that way.

Need your websites hosted reliably?

Talk through your project with the engineer responsible for delivery. We agree the scope, price basis and handover in writing before work begins.

Role context: Full Stack Web Developer. It draws on Web Development, Infrastructure, Reliability & Backups, Linux & Servers, Performance Tuning and System Administration. And while you are here, we are rather good at Website Development & CMS, Site Reliability & Monitoring and System Administration.
